

## Assignment for Senior Machine Learning Engineers

### Objective:

Develop an **agentic application** with a simple user interface.

### Tasks:

1. **Agentic Application Development:**
  - Design and implement an **agent-based system** using a framework of your choice.
2. **User Interface:**
  - Develop a simple **UI using tools like Gradio** to interact with the agent.

### Deliverable:

- **An open-source GitHub repository** containing:
  - Source code
  - Documentation
  - Instructions for setup and usage

### Reference:

- You may explore [Agentic Retrieval Augmented Generation projects](#) for guidance.

### Expectations:

- Ensure **good coding practices** and clean, maintainable code.
- Include **well-structured documentation** to explain the approach and implementation.
- Provide clear **setup instructions** to help reviewers run and test your solution.
- The final deliverable must be a **public GitHub repository**.

This assignment will help assess your ability to create a **functional, scalable, and well-documented ML solution**. We look forward to seeing your innovative implementations!
